

**CLAIMS**

There is, therefore, stillroom in the industry for bras that have decorative backs. Decorative Bra Backs connect side to side rather than center back.

This Bra Back can, though should not be limited to: it's interchangeable capacity. The Bra Backs can be shared between the bras as well as its bra's built-in capacity in slips and camisoles.

This system can be used to replace conventional bras when comfort and support are preferred, while a desire to wear fashionable backless garments will not be compromised.

Construction materials include, though are not limited to the following:

Beads, glass, stone, plastic or metallic. Silk threads. Ribbon and yarn.

Knitting, crochet and macramé techniques. Embroidery, bead knitting and bead crocheting as well as leather.

All decorative components can be constructed with or without a soft fuzzy or stretchable base. Depending on decorative details.

Managing side-to-side size adjustments consist of: multiple pockets with sliders, snaps, or hook sand eyes for sizing and transitioning front of bra to Decorative Bra Back.
